

This Is the Blueprint We Will Create

Volume 1 — Product & Business

This is what we're building and why.

1. Product Vision
 2. Business Goals
 3. Problem Statement
 4. Target Users
 5. Competitor Analysis
 6. User Personas
 7. User Stories
 8. Functional Requirements
 9. Non-functional Requirements
 10. Product Roadmap
-

Volume 2 — Software Architecture

How the system is designed.

1. High-Level Architecture
 2. Low-Level Architecture
 3. Frontend Architecture
 4. Backend Architecture
 5. AI Architecture
 6. Authentication Architecture
 7. Authorization Architecture
 8. Database Architecture
 9. Cloud Architecture
 10. Security Architecture
-

Volume 3 — UI/UX

Every screen.

Examples:

- Landing Page

- Login
- Register
- Forgot Password
- Dashboard
- Candidate Profile
- Recruiter Dashboard
- Admin Dashboard
- AI Chat
- Resume Analysis
- Interview Room
- Analytics
- Settings
- Notifications
- Company Profile
- Job Details
- Job Search
- Applications
- Calendar
- Reports

Every page will include:

- Purpose
- Components
- Validation
- Actions
- API dependencies
- Loading states
- Error states

Volume 4 — Database Design

Every table.

Examples:

- users
- roles
- permissions
- companies
- candidates
- recruiters
- jobs
- applications
- resumes
- resume_versions
- skills
- education
- experience
- certifications
- ai_chats
- interview_sessions
- notifications
- audit_logs
- subscriptions
- activity_logs
- refresh_tokens

For every table we'll define:

- Columns
- Data types
- Constraints
- Indexes
- Foreign keys
- Relationships
- Purpose

Every endpoint.

Example:

POST /api/v1/auth/login

Request

Response

Validation

Authorization

Possible Errors

Status Codes

We'll repeat this for every endpoint.

Volume 6 — AI

This will be one of the strongest parts of the project.

Resume AI

- Resume Parsing
- ATS Score
- Resume Suggestions
- Resume Summary

Recruiter AI

- Candidate Ranking
- Skill Matching
- Shortlisting

Candidate AI

- Career Roadmap
 - Skill Gap Analysis
 - Cover Letter Generator
 - Mock Interview
 - AI Career Coach
-

Company AI

- Hiring Analytics
 - Job Description Generator
 - Salary Recommendation
-

Volume 7 — Frontend

Every component.

Examples:

Navbar

Sidebar

Cards

Charts

Forms

Buttons

Tables

Data Grid

Filters

Modals

Upload

Calendar

Timeline

Chat

Rich Text Editor

Notifications

Profile Cards

Statistics Cards

Everything reusable.

Volume 8 — Backend

Every package.

controller

service

repository

entity

dto

mapper

security

config

exception

scheduler

event

cache

storage

utils

validation

Each package will have a defined responsibility.

Volume 9 — Security

Authentication

JWT

Refresh Token

OAuth2

RBAC

Permissions

Rate Limiting

Encryption

Audit Logs

Security Headers

File Upload Validation

Volume 10 — DevOps

Docker

Docker Compose

Nginx

GitHub Actions

Deployment

Environment Variables

Logging

Monitoring

Backups

Volume 11 — Testing

- Unit Tests
- Integration Tests
- API Tests
- Frontend Tests
- Security Tests
- Performance Tests
- Manual Testing Checklist

 Volume 12 — Documentation

- README
- Swagger
- Installation Guide
- Developer Guide
- Deployment Guide
- Architecture Guide
- Contribution Guide

Project Scale

This is approximately what we'll end up with:

Category	Estimated Size
UI Pages	30–40
Reusable Components	100+
Backend Modules	25–35
REST APIs	150–200
Database Tables	30–50
User Roles	5–6
AI Features	15–20
Charts & Reports	15+
Notification Types	20+

Category	Estimated Size
Documents	10+

Technology Stack

We'll freeze this before coding so we don't keep changing it:

Frontend

- React 19
- Next.js
- TypeScript
- Tailwind CSS
- shadcn/ui
- React Query
- Zustand or Redux Toolkit
- React Hook Form
- Zod
- Framer Motion

Backend

- Java 21
- Spring Boot 3
- Spring Security
- Spring Data JPA
- Hibernate
- JWT
- Spring AI
- Maven

Databases

- PostgreSQL
- Redis
- MongoDB (only if we find a clear need; otherwise we'll avoid unnecessary complexity)
- Vector Database (Qdrant)

AI

- Spring AI
- Ollama (local development)
- OpenAI or Gemini (optional deployment)

DevOps

- Docker
- Docker Compose
- GitHub Actions
- Nginx

Cloud

- Vercel
 - Render or Railway
 - Neon PostgreSQL
 - Cloudinary
-
