

PHASE 2

Product Requirements Document (PRD)

This is the first real document of TalentAI.

From this point onward, every feature, database table, API, UI screen, AI module, and test case will originate from the PRD.

Think of it as the birth certificate of TalentAI.

Before We Write The PRD

I want to freeze something that even many startups don't define properly.

Product Identity

If this isn't finalized now, we'll keep changing things later.

1. Product Name

TalentAI

Status:

☒ Frozen

2. Tagline

I have three strong options.

Option 1  (My Recommendation)

The AI-Powered Talent Intelligence Platform

Very professional and future-proof.

Option 2

Smarter Hiring. Better Careers.

Simple and memorable.

Option 3

Where Talent Meets Intelligence

Modern and marketing-friendly.

I recommend Option 1.

3. Mission Statement

Current draft:

TalentAI empowers candidates, recruiters, and companies through AI-driven recruitment, career development, and talent intelligence while keeping humans in control of hiring decisions.

This will appear:

- **GitHub**
 - **Website**
 - **README**
 - **Documentation**
-

4. Vision Statement

To become a modern AI-powered talent platform that helps people discover opportunities, improve careers, and enable companies to hire better through ethical artificial intelligence.

5. Core Values

These define our product philosophy.

Transparency

AI always explains recommendations.

Security

User data comes first.

Privacy

No unnecessary collection of personal data.

Human Control

AI assists.

Humans decide.

Simplicity

Powerful features.

Simple interface.

Scalability

Built for growth.

Accessibility

Usable by everyone.

6. Target Users

Instead of saying

Candidate

Recruiter

Let's define them professionally.

Primary Users

Candidate

Recruiter

Company HR

Company Administrator

Platform Administrator

Secondary Users

Hiring Managers

Interviewers

Career Coaches

Universities (future)

Training Partners (future)

7. Product Goals

Instead of saying

"Build recruitment platform"

We'll define measurable goals.

Example:

Candidate Goals

- Build a professional profile.
 - Improve resume quality.
 - Discover relevant jobs.
 - Prepare for interviews.
 - Track applications.
-

Recruiter Goals

- Create jobs quickly.
 - Find better candidates.
 - Reduce manual resume review.
 - Improve hiring efficiency.
-

Platform Goals

- Secure.
 - Fast.
 - Reliable.
 - Scalable.
 - AI-assisted.
 - Mobile-ready.
-

8. Product Modules

Instead of thinking in pages,
we think in modules.

Current proposal:

TalentAI Platform

└─ Identity Module

- |— Candidate Module
- |— Recruiter Module
- |— Company Module
- |— Job Module
- |— Application Module
- |— Resume Module
- |— AI Module
- |— Interview Module
- |— Notification Module
- |— Analytics Module
- |— Reporting Module
- |— Storage Module
- |— Search Module
- |— Administration Module
- |— Audit Module
- |— Settings Module
- |— Monitoring Module
- |— Integration Module

Each module will later have:

- Database
- APIs
- UI
- AI
- Tests
- Documentation

9. AI Capabilities

I want to freeze the complete AI scope now.

Candidate AI

- Resume Analysis

- **ATS Score**
 - **Resume Summary**
 - **Resume Improvement**
 - **Career Roadmap**
 - **Skill Gap Analysis**
 - **Job Matching**
 - **Cover Letter Generator**
 - **Career Chat Assistant**
 - **Interview Coach**
-

Recruiter AI

- **Resume Ranking**
 - **Candidate Summarization**
 - **Interview Question Generator**
 - **Job Description Generator**
 - **Candidate Recommendation**
 - **Hiring Insights**
-

Platform AI

- **Search Enhancement**
 - **Analytics Insights**
 - **AI Email Generation**
 - **AI Notification Generation**
-

10. Business Model

Even though our project is free,
we should design it like a real SaaS.

Version 1

Candidate

Free

Recruiter

Free

Company

Free

Future

Premium Plans

Enterprise Plans

Usage Limits

Subscription System

Architecture only.

No payments in Version 1.

11. Versioning Strategy

Version 1

Complete Recruitment Platform

Version 2

Advanced Analytics

Version 3

AI Agents

Version 4

Enterprise Features

Version 5

Mobile App

12. Success Criteria

A project is successful if:

- **A candidate can register, upload a resume, receive AI feedback, apply for jobs, and track applications.**
 - **A recruiter can create jobs, review AI-ranked candidates, and manage hiring.**
 - **The platform is secure, documented, deployable, and maintainable.**
 - **You can confidently explain every major architectural decision in an interview.**
-
