

Rule No. 1 (Our Project Rule)

The Blueprint is the Project.

The code is only an implementation of the blueprint.

If tomorrow:

- GitHub is deleted
- Laptop crashes
- SSD fails
- Repository gets corrupted
- We switch from Java to another language years later

we should still be able to rebuild the entire platform from the blueprint.

Rule No. 2

No paid software unless absolutely necessary.

Our target is:

₹0 Development Cost

We'll only use free or community editions.

Category	Tool	Cost
IDE	VS Code	Free
Java IDE	IntelliJ Community	Free
Database	PostgreSQL	Free
Cache	Redis	Free
Vector DB	Qdrant	Free
AI	Ollama	Free
Source Control	Git + GitHub	Free
API Testing	Postman / Bruno	Free
Containers	Docker Desktop	Free (personal use)
UI Design	Figma Free	Free
Deployment	Vercel + Render + Neon Free tier	

If we ever choose to add Gemini or OpenAI APIs, they will be **optional**, not mandatory.

Rule No. 3

Every technology must have a reason.

We are **not** using technologies just because they're popular.

For example:

✗ Wrong:

"Let's add MongoDB because companies use it."

✓ Correct:

"Let's add MongoDB only if our data model actually benefits from a document database."

We'll make these decisions deliberately.

I Want to Expand the Blueprint

The previous blueprint was around **10%** of what I have in mind.

I want to create something much larger.

Final Blueprint Structure

Volume 0 — Vision

This will answer:

- Why TalentAI exists.
 - What problem it solves.
 - Future roadmap.
 - Mission.
 - Goals.
 - Product philosophy.
-

Volume 1 — Product Requirements (PRD)

Everything about the product.

- Vision
- Goals
- Competitors
- Personas
- User stories

- Features
 - MVP
 - Future versions
-

Volume 2 — Software Requirement Specification (SRS)

The official requirements.

Every functional requirement.

Every non-functional requirement.

Performance.

Availability.

Security.

Scalability.

Accessibility.

Localization readiness.

Volume 3 — System Architecture

Everything.

- Context Diagram
 - Architecture Diagram
 - Layer Diagram
 - Module Diagram
 - AI Diagram
 - Deployment Diagram
 - Security Diagram
 - Network Diagram
 - Data Flow Diagram
-

Volume 4 — Database

Not just tables.

For every table:

- Purpose

- ER Diagram
- Columns
- Constraints
- Validation
- Relationships
- Triggers (if any)
- Indexes
- Soft Delete
- Audit
- Version History

Volume 5 — API Blueprint

Every API.

Including:

- Request
- Response
- Headers
- Status Codes
- Validation
- Error Codes
- Authentication
- Rate Limits
- Examples

Volume 6 — Frontend Blueprint

Every page.

Every component.

Every animation.

Every popup.

Every form.

Every icon.

Every state.

Every loading skeleton.

Every empty state.

Every error state.

Every responsive breakpoint.

Volume 7 — Backend Blueprint

Every package.

Every service.

Every interface.

Every repository.

Every DTO.

Every Mapper.

Every Validator.

Every Scheduler.

Every Event.

Every Cache.

Everything.

Volume 8 — AI Blueprint

This is where I want to go much deeper.

Not just

"Resume Analyzer."

Instead:

Resume Analyzer

↓

OCR (optional future)

↓

Resume Parsing

↓

Skill Extraction

↓

Experience Extraction

↓

ATS Analysis

↓

AI Feedback

↓

Embedding Generation

↓

Vector Search

↓

Job Matching

↓

Career Suggestions

We'll document each step.

Volume 9 — Security Blueprint

Everything.

Authentication.

Authorization.

Permission Matrix.

Password Policy.

Rate Limiting.

Refresh Tokens.

Audit.

Logging.

File Validation.

Encryption.

Security Headers.

Volume 10 — DevOps Blueprint

Docker
Compose
Nginx
CI/CD
Deployment
Rollback
Backup
Secrets
Monitoring
Health Checks

Volume 11 — Testing Blueprint

Testing Strategy
Unit Tests
Integration Tests
API Tests
UI Tests
Regression Tests
Performance Tests
Security Tests
Manual Testing

Volume 12 — Documentation

README
Architecture
Setup
Installation
Deployment
Contributing
Developer Guide
Admin Guide
